

HACK LASSONDE

Welcome to Hack Lassonde!

You are cordially invited to our second annual hackathon taking place on March 9-10th, 2019, at the Bergeron Building at York University (Keele Campus).

We will be hosting over 200 students for approximately 36 hours, focusing on creating applications within a framework of sustainability. Although the event's organizing team is comprised of Engineering students, applications will be open to students in business, design, and computer science across the country to create exciting multidisciplinary software and hardware.

Why Sponsor a Hackathon?

Your company will benefit through:

- Recruiting from a pool of business savvy and tech-capable students, increasing the quality of applicants for your organization
- Promotion of your brand and company culture to the attendees as well as the larger student body within our advertisement sphere
- Creative solutions to relevant problems. Depending on your sponsorship tier, the opportunity to present an organization-specific challenge where students will be competing to most effectively solve your organization's problem.

For the full list of benefits and sponsorship tier specifications, please see the table below!

Sustainability and Security - Our Thematic Focus

Technology is often created with the intention that it will be obsolete, or break down within a few years. Other times, products may be pushed to market before security features are implemented, without the awareness of the dangers to the consumer.

We want to challenge this idea to weave integrity into the products our students create. Each project that we'll be fostering will choose an area of sustainability, and teams will be awarded points depending on how efficiently they reduce consumer risks specific to their product.

For our Students and Sponsors

We wanted Hack Lassonde to embody the idea of sustainability through as many mediums as possible such as food, activities, and engagement by offering:

- Healthy and alternative food choices instead of the standard energy drinks, coffee and pizza that is often provided.
- Free 5 minute massages for 12 participants, each day.
- One-on-one check-in sessions. We know that hacking can get intense. We'll be there to provide that talk therapy support in a private, safe space.
- Midnight meditation and a morning yoga party! Staying active and practicing focus increases the efficiency of our students, but also our volunteers and mentors.
- Stress-busting sessions. We've planned various events, such as bringing in a certified therapy dog for an hour to help keep stress levels down and coding levels up!

**We look forward to working together!
